

What is claimed is:

1. A printer device, having framework including a plurality of framing members connected with each other, comprising:

an image holding body;

5 writing means for writing an image in accordance with an image signal onto said image holding body;

image formation means for adhering a pigment to the image which is written onto said image holding body by said writing means; and

10 paper conveyer means for conveying a paper to transcription means for transcribing the pigment, which is adhered onto said image holding body by said image formation means, onto the paper, and

said plurality of framing members including

15 a lower frame which is arranged on a lower section of said printer device and adjacent to an installation surface of said printer device, and

a sub-frame which supports said image holding body and said writing means, and

20 said sub-frame being connected with said lower frame at three connection points, and being unlikely to be twisted even if said lower frame is twisted as a result of unstable arrangement of the lower frame.

2. The printer device according to claim 1, wherein:

25 said lower frame and said sub-frame are formed approximately in a rectangular shape; and

said lower frame and said sub-frame are connected with each

other at two connection points on a predetermined side of the rectangular shape, and said lower frame and said sub-frame are connected with each other at one point on a side facing the predetermined side of the rectangular shape.

5 3. The printer device according to claim 2, wherein said sub-frame further supports said paper conveyer means.

4. The printer device according to claim 3, wherein:
 said image holding body, said wiring means and said image
 formation means are incorporated with each other so as to form
 10 an image formation unit; and

 said printer device is a tandem-type printer device including
 a plurality of image formation units respectively corresponding
 to a plurality of colors.

5. The printer device according to claim 1, wherein said
 15 sub-frame further supports said paper conveyer means.

6. The printer device according to claim 5, wherein:
 said image holding body, said writing means and said image
 formation means are incorporated with each other so as to form
 an image formation unit; and

20 said printer device is a tandem-type printer device including
 a plurality of image formation units respectively corresponding
 to a plurality of colors.
